COURSE ADMINISTRATION

Welcome

- 1 Introductions
- 2 Ground rules
- 3 Course outline
- 4 How today runs

Let's Know Each Other

Take a minute to introduce yourself to the class.

1

Your name and role

Which team you sit in and what you are responsible for.

2

Your reporting work

One report or summary you produce again and again.

3

Your tools

Whether your finance data lives in Excel, Google Drive or a system.

4

Your goal today

What you would most like to stop doing by hand.

About the Trainer

Qualifications: _____

Expertise: _____

Experience: _____

Contact / Profile: _____

About the Trainer

PhD-qualified trainer specialising in AI, software engineering and developer tooling.

Hands-on experience building agentic AI applications and automations with Claude.

Trains professionals across Singapore on practical, project-based AI skills.

Certifications: PMP, AWS, Microsoft, CompTIA, CKA, CKAD.

linkedin.com/in/angchewhoe

github.com/alfredang

Ground Rules

Phones on silent

Step out quietly if you need to take a call.

Ask as you go

No question is too small — others usually have the same one.

Learn by doing

Every topic ends with a lab you build yourself.

Use the mock data

Never bring real client or personal data into a training exercise.

Check before you send

Approve every draft against the source figures.

Mutual respect

One conversation at a time; agree to disagree.

Course Outline

1

Claude Cowork Fundamentals

- The Claude product family
- Set up Cowork
- Live Artefacts
- Working with documents

2

Tools and Skills

- Connectors
- Drive and Gmail
- Agent Skills
- Do · Verify · Save

3

Claude Projects

- What a Project is
- Project instructions
- Assemble the workspace
- Lab 7: the Meridian project

Learning Outcomes

1

Process documents

Set up the Cowork desktop workspace and have Claude process a folder of documents into a structured summary.

2

Build a Live Artefact

Build, save and download a Live Artefact, including an interactive sales dashboard from supplied data.

3

Connect Drive

Connect the Google Drive connector so Claude can read finance data held outside the chat.

4

Deliver by Gmail

Refresh a Live Artefact from connected data and send an approved summary with the Gmail connector.

5

Save it as a skill

Turn a verified routine into an Agent Skill with /skill-creator, update it, and explain a skill's three layers.

6

Build the Project

Assemble a Claude Project that holds the data, instructions, skill and dashboard as one reusable team workspace.

Lesson Plan — One Day

9:00am – 6:00pm, with a one-hour lunch and two tea breaks.

Morning

- 9:00 Welcome
- 9:20 Topic 1 — Claude Cowork Fundamentals
- 10:00 Topic 1 — Live Artefacts
- 10:30 Tea break
- 10:45 Topic 1 — Working with documents
- 11:15 Hands-on: Labs 1, 2

Afternoon

- 12:30 Lunch break
- 13:30 Hands-on: Lab 3
- 14:10 Topic 2 — Tools and Skills
- 14:40 Hands-on: Labs 4, 5
- 15:35 Tea break
- 15:50 Topic 2 — Agent Skills
- 16:10 Hands-on: Lab 6
- 16:45 Topic 3 — Claude Projects
- 17:05 Hands-on: Lab 7
- 17:45 Recap

How You'll Learn

Seven labs, one continuous scenario — each lab builds on the one before it.

THE SCENARIO

One firm, seven labs

Meridian Capital Partners is a fictitious Singapore-based investment and advisory firm with four revenue desks — Advisory, Asset Management, Private Credit and Corporate Finance. All figures, clients, staff and documents in this course are synthetic and used for training only.

TOPIC 01

Claude Cowork Fundamentals

- 1 The Claude product family
- 2 Set up Cowork
- 3 Live Artefacts
- 4 Working with documents

The Claude Product Family

Anthropic offers several Claude products — here's how they differ so you know which is which.

Claude.ai

The chat assistant on web, desktop & mobile for everyday tasks.

Claude Code

Agentic coding tool in your terminal, IDE & desktop.

Claude Cowork

Desktop agent for non-developers to automate files & tasks.

Claude Design

Generates polished UI & frontend designs.

Claude for Microsoft

Claude inside Microsoft 365 & Outlook.

Claude for Chrome

Browser agent that navigates and acts on the web for you.

Claude for Science

Speeds up research workflows for scientists and labs.

TIP All are powered by the same Claude models — they differ in where they run and who they're for.

Chat, Cowork or Code?

This course is about the middle one — the work partner that acts on your files and tools rather than only answering.

The Evolution of AI Engineering

More capable models shift the work from wording prompts → curating context → engineering the whole harness.

What Makes Cowork So Useful

Five things a chat window cannot do.

1

Access local files

Read, write and reorganise the folders on your computer.

2

Write & run code

It writes the code a task needs and runs it — you never see or edit it.

3

Connect to tools

Reach Google Drive, Gmail and Calendar through connectors.

4

Skills & plugins

Reusable instructions it loads on demand, shareable with your team.

5

Agent loop

Plan, act, check, correct — it keeps working until the task is done.

Claude Pricing

Cowork is a desktop feature of the paid Claude plans — the same subscription that covers Claude Chat and Claude Code.

Pro

\$17/mo (annual) • \$20 monthly.
Cowork included.

Max

From \$100/mo — 5× or 20×
more usage than Pro.

Team

\$20/seat standard • \$100/seat
premium (5× usage).

Enterprise

\$20/seat + usage at API rates.
Contact sales.

API pay-as-you-go (per million tokens, input / output): Opus 4.8 \$5 / \$25 • Sonnet 4.6 \$3 / \$15 • Haiku 4.5 \$1 / \$5

TIP A free plan is also available, but it does not include Cowork. Prices as of June 2026 — verify at claude.com/pricing.

Set Up Claude Cowork

Cowork runs in the Claude desktop app on a paid plan.

1

Install the desktop app

Download Claude for Mac or Windows from claude.ai/download — Live Artefacts and local file access are desktop features.

2

Sign in on a paid plan

Cowork is available on paid plans; sign in with the account that has your subscription.

3

Open Cowork

Choose Cowork in the sidebar to get the agent workspace rather than a plain chat.

4

Point it at a folder

Connect the one folder for the task so Claude reads your files and writes its output back.

5

Enable what it needs

Turn on only the connectors the task needs, from the + menu.

6

Keep the app open

The desktop app must stay open while a task is using your computer.

Key Concepts — Claude Cowork Fundamentals

1

Claude Cowork

The desktop agent that works on your files and tasks — built for non-developers, not coders.

2

Live Artefacts

Interactive tools that persist in your workspace and refresh their data when reopened.

3

Desktop, not browser

Live Artefacts and local file access need the Claude desktop app on a paid plan.

4

Describe, don't code

You describe the tool you want in plain English; Claude writes and runs the code.

5

Save to the sidebar

A saved artefact is reopenable and reusable — it is not lost in the chat history.

6

Download to share

Export the artefact so it can be filed, attached or handed to someone without Claude.

Process a Folder of Invoices

LAB 01

Meridian's accountant needs the 2025 supplier invoices summarised and filed. You point Cowork at a folder of 126 PDFs — a full year of invoices, a few expense receipts, and the untidy filenames a real downloads folder collects — and have it read every document, build one CSV, and sort the files into month folders. This is work no dashboard can do: reading documents and acting on your file system. It is also far more than you would ever do by hand, which is the point.

YOU'LL BUILD

An `invoices_2025.csv` summary plus the PDFs filed into YEAR-MONTH folders.

Tools: Claude Cowork, local files, PDF reading

Extract the invoice data and file the PDFs

PROMPT — copy into Claude

In this folder are all my invoices from 2025. I need you to process these so I can send them to my accountant.

Read each invoice and extract the following data points:

- invoice number
- invoice sender
- invoice sender address
- invoice date
- invoice due date
- total amount due
- currency

NOTE Continues on the next slide.

Extract the invoice data and file the PDFs (cont.)

PROMPT — copy into Claude

Then create a CSV called invoices_2025.csv where you store all this information as well as the filename.

After you have extracted the information, move each invoice PDF into sub folders based on the YEAR-MONTH of the invoice date, using the naming convention 2025-01, 2025-02 and so on.

Flag anything that does not look like a normal supplier invoice, or that you think I should check. Do not delete any file.

NOTE Work on a copy of the folder — tell Claude to move files, never to delete them.

Process a Folder of Invoices

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 Open the Claude desktop app, sign in, and choose Cowork in the sidebar.
- 2 Copy the lab's "2025 Invoices" folder somewhere you can work on it.
- 3 Open the folder yourself and skim it before you start — 126 files.
- 4 Start a Cowork session pointed at that folder, then paste the lab prompt.
- 5 Let Claude work through the PDFs — this one takes a few minutes.
- 6 Open invoices_2025.csv and check the row count against the folder.
- 7 Total the SGD column and compare it against S\$777,954.81.
- 8 Check the currency column — four invoices are in US dollars.
- 9 Confirm the PDFs now sit in 2025-01 ... 2025-12 folders and nothing was deleted.
- 10 Read Claude's list of flagged items and decide what to do about each.

Process a Folder of Invoices

✓ Check your work

invoices_2025.csv lists every invoice with all seven fields plus the filename. The 117 SGD invoices total S\$777,954.81; the four USD invoices are marked USD rather than added to that total. The duplicated invoice and the four expense receipts are flagged rather than counted as ordinary invoices. The PDFs now sit in 2025-01 ... 2025-12 folders and all 126 files are still present.

Why a Live Artefact?

The difference between an answer you read and a tool you keep.

A normal chat answer

- A static snapshot in the conversation.
- Scrolls away as the chat grows.
- Figures are frozen at the moment they were written.
- You copy and paste to reuse anything.
- Nothing to click, filter or explore.

A Live Artefact

- An interactive tool with its own space in the sidebar.
- Reopenable — it stays available after the chat ends.
- Pulls fresh data when you open it.
- Keeps what you typed into it between sessions.
- Clickable: filter, sort and drill into the numbers.

Building a Live Artefact

You describe the outcome in plain English — Claude writes and runs the code.

What an Artefact Can and Cannot Do

Artefacts run in a sandbox, so anything needing the internet has to come in another way.

An artefact **CAN**

- Run interactive code — inputs, filters, charts.
- Use data you gave it, or that Claude looked up while building.
- Keep what you type into it between sessions.
- Be saved, reopened and shared.
- Be downloaded as a file you own.

An artefact **CANNOT**

- Call an external API or website — the sandbox blocks it.
- Load a script, font or image from another site.
- Reach your local files or network.
- Refresh third-party data on its own.
- So: bake the data in, or download the HTML and run it yourself.

Your First Live Artefact

LAB 02

Now you have seen Cowork do a real piece of work, meet the other thing it makes: a Live Artefact. You build a small tool rather than ask a question, so you can see how an artefact differs from a chat answer — it persists, it is interactive, and you can save and download it. You also meet the sandbox: an artefact cannot call the internet, so you build one version with the rates baked in and a downloadable HTML version that fetches them live.

YOU'LL BUILD

An FX converter as a saved artefact, plus a downloadable HTML version with live rates.

Tools: Claude desktop app, Claude Cowork, Live Artefacts

Build your first Live Artefact

PROMPT — copy into Claude

Two things, in order.

1. Look up today's mid-market exchange rates from SGD to USD, EUR and GBP, and tell me the rates and the date you found them.
2. Build me a Live Artefact: a currency converter for Meridian Capital Partners using exactly those rates.
 - Convert between SGD, USD, EUR and GBP.
 - One amount box, a from-currency and a to-currency selector, and a large result.
 - Under the result show the rate used, and a line saying "Rates as at <the date you looked them up>".
 - Clean, professional finance styling. Label it "Meridian Capital Partners".

NOTE Continues on the next slide.

Build your first Live Artefact (cont.)

PROMPT — copy into Claude

Make it interactive so I can change the amount and see the result update.

Then give me the same converter as a standalone HTML file I can download, and in that version fetch the rates live from a free no-key API when the page opens, with a Refresh button.

NOTE An artefact cannot call an external API — that is a sandbox rule, not a bug. Claude looks the rates up for you and builds them in; the downloadable HTML runs in your browser, so it can fetch live.

Your First Live Artefact

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 Start a new Cowork session — this lab needs no files.
- 2 Paste the lab prompt into the composer and send it.
- 3 Try the converter: change the amount and switch the currencies.
- 4 Check the rate Claude found against a search for "1 USD to SGD".
- 5 Open the downloaded HTML file in your browser and click Refresh.
- 6 Ask for one refinement in plain English, for example: Add a thousands separator to the result.
- 7 Save the artefact so it appears in your sidebar.
- 8 Download a copy of the artefact to your lab folder.

Your First Live Artefact

✓ Check your work

The artefact converts S\$10,000 to USD using the rate Claude looked up, and shows a "Rates as at ..." line with today's date. The downloaded HTML file opens in your browser, fetches rates itself and updates them when you click Refresh. The artefact appears in your sidebar after saving and still works when reopened.

The screenshot shows a web application for Meridian Capital Partners, Treasury & FX Desk. It features a currency converter interface. At the top, there is a logo with the letter 'M' inside a circle. Below the logo, the text 'Meridian Capital Partners' and 'TREASURY & FX DESK' are displayed. The main section of the interface is a white card with a rounded border. It contains a label 'AMOUNT (SGD)' above a text input field with the value '10,000'. Below this, there are two dropdown menus labeled 'FROM' and 'TO'. The 'FROM' dropdown is set to 'SGD — Sing' and the 'TO' dropdown is set to 'USD — US D'. A circular icon with a dollar sign is positioned between the two dropdowns. Below the dropdowns, the converted amount is displayed as '\$7,400.00' in a large, bold font. Underneath this, a small line of text indicates the exchange rate: '1 SGD = 0.7400 USD'. At the bottom of the card, a disclaimer reads: 'Indicative rates for illustration only • Meridian Capital Partners'.

The finished converter — your rates will differ

The Meridian Sales Dashboard

LAB 03

Meridian's head of finance wants to see how the four revenue desks performed this year without opening a spreadsheet. You take the supplied sales data and build it into a Live Artefact dashboard — KPI tiles, a trend chart and a desk breakdown — then save it. This dashboard is the artefact every later lab builds on.

YOU'LL BUILD

A saved Live Artefact dashboard showing Meridian's FY2025 revenue by desk.

Tools: Claude Cowork, Live Artefacts, local files

Build the Meridian sales dashboard

PROMPT — copy into Claude

Using the attached meridian-sales-fy2025.csv, build me a Live Artefact:
an interactive sales dashboard for Meridian Capital Partners.

Include:

- KPI tiles: total revenue, total deals, average deal size, best desk.
- A monthly revenue trend chart for the full year.
- A breakdown of revenue by desk (Advisory, Asset Management, Private Credit, Corporate Finance).
- A filter to show one desk at a time or all desks.

Format all money as Singapore dollars with thousands separators.

Use a clean, professional finance layout. Title it

"Meridian Capital Partners — FY2025 Revenue".

NOTE Attach the CSV from your lab's mock-data folder before sending the prompt.

The Meridian Sales Dashboard

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 Open the lab folder and look at meridian-sales-fy2025.csv so you know what the data holds.
- 2 Start a Cowork session and attach the CSV, or point Claude at the lab folder.
- 3 Paste the lab prompt and send it.
- 4 Check the KPI tiles against the CSV: total revenue should be S\$24,850,000 across 214 deals.
- 5 Use the desk filter to view Advisory on its own, then return to all desks.
- 6 Refine the layout in plain English, for example: Move the KPI tiles above the chart.
- 7 Save the dashboard to your sidebar with a clear name, then download a copy.

The Meridian Sales Dashboard

✓ Check your work

The dashboard shows total revenue S\$24,850,000 and 214 deals, Advisory is the best desk at S\$8,420,000, the desk filter changes the chart, and the artefact reopens from your sidebar after you close it.

Recap — Claude Cowork Fundamentals

1

Lab 01

You can now extract structured data from a folder of PDFs and reorganise the files.

2

Lab 02

You can now set up the Cowork workspace and build, save and download a Live Artefact.

3

Lab 03

You can now turn supplied finance data into an interactive Live Artefact dashboard.

TOPIC 02

Tools and Skills

- 1 Connectors
- 2 Drive and Gmail
- 3 Agent Skills
- 4 Do · Verify · Save

What Connectors Do

Connectors let Claude reach data and services that live outside the chat.

1

Google Drive

Search and read Sheets, Docs, Slides and PDFs; upload files; create folders; save Claude's output back to Drive.

2

Gmail

Search and read mail, draft messages, send / reply / forward with approval, and manage labels.

3

Google Calendar

View events, find availability, and create or update meetings.

4

Approval by default

Claude asks for explicit approval before it sends, replies to or forwards an email.

5

Where to manage them

Individually from the + menu; account-wide under Customize → Connectors.

6

Known limits

Attachment contents are not read (metadata only) and images embedded in Docs are not processed.

Turning On a Connector

Manage them any time under Customize → Connectors.

Context Window

“

The context window is all the information the model can “see” when producing a response.

”

Files, instructions, tools and skills all have to fit inside it.

What Fills the Context Window

At the start of a session.

At the start of a session only the fixed overhead is loaded — most of the window is still free.

The Same Window, Later in the Session

After reading files, calling tools and running skills.

As the task runs, files, tool results and executed skills all accumulate. Start a fresh session for a new task rather than letting one fill up.

When the Context Window Fills Up

1. Context rot

Performance degrades. Recall of specific facts gets worse, the model starts confusing similar entities, and reasoning quality drops.

2. Tool confusion

Claude sees every tool definition. The more options competing for its attention, the more likely it picks the wrong one or fills in the wrong parameters.

3. Slower responses

The model processes every token on every turn. A bigger context means more work per message, which means longer waits before you see a reply.

4. Eats up your usage faster

Your entire context gets resent with each new message — so more tokens are burned per turn, and your limits are reached sooner.

The fix is housekeeping: one task per session, only the connectors you need, and only the files the task actually reads.

Five Levers of Context

What you actually control.

1

Conversation

Your prompt. The messages you send, including both text and attachments.

2

Working folder

The files and folders Claude can access while working on the task.

3

Connectors

The connected tools Claude can pull data from, and take actions in.

4

Skills

A set of instructions Claude follows for a repeatable workflow.

5

Instructions

Saved instructions at the folder level, which Claude always reads first.

Every lab today pulls one of these levers — the working folder in Lab 1, connectors in Labs 4–5, a skill in Lab 6, and project instructions in Lab 7.

Check It Yourself: /context

Estimated usage by category, for a 1M-token window.

Category	Tokens	Percentage
System prompt	35.3k	3.5%
System tools	768	0.1%
MCP tools	2.6k	0.3%
MCP tools (deferred)	301.7k	30.2%
Memory files	81	0.0%
Skills	9k	0.9%
Messages	13	0.0%
Free space	650.5k	65.0%

Run /context to see this for your own session. Note how much a large set of connectors costs before you have typed anything — turn off the ones you do not need.

Skills Are Documented on Three Layers

Each layer reaches Claude at a different moment — which is why the description matters most.

Anatomy of an Agent Skill

A skill is a folder Claude loads on demand when the task matches its description.

1

Metadata — name

A short identifier such as daily-brief. This is what you type to run it.

2

Metadata — description

What the skill does and WHEN to use it. Always in context, so this is what Claude matches against your request.

3

Instructions (SKILL.md)

The routine itself: which tools to check, in what order, and what to report.

4

Resources

Optional templates, documents or code the instructions call on.

Creating Your Own Skill

Do not write a skill from a blank page — do the work first, then capture it.

`/skill-creator` writes the `SKILL.md` for you, from the run you just verified.

Skills vs. Plugins

A skill is one routine. A plugin is the whole setup — hand a colleague the plugin and they get every skill, tool and agent it contains.

A Skill vs Retyping the Request

Write the routine once, and run it by name from then on.

Retyping the request each time

- You describe the whole routine again every morning.
- Easy to forget a step when you are in a hurry.
- Each colleague words it slightly differently.
- The output format drifts from day to day.
- Nothing to hand to a new joiner.

An Agent Skill

- Written once in SKILL.md and run by name.
- Claude follows every step, every time.
- The whole team shares one folder.
- The same structure and format each run.
- Onboarding is: copy the skill folder.

A Skill That Drives Your Tools

The most useful skills combine the connectors into one repeatable command.

1

One command

Run the whole routine by name instead of describing it again each time.

2

Across your tools

The skill decides which connectors to check — Drive, Gmail, Calendar — and in what order.

3

A fixed structure

It reports back in the same sections every run, so you can scan it in seconds.

4

With fallbacks

When a source has nothing new, it says so plainly rather than inventing filler.

5

Still under approval

The skill drafts and reports; sending anything still needs your approval.

6

Shared with the team

Everyone runs the same routine and gets the same briefing format.

Key Concepts — Tools and Skills

1

Connectors

Toggle Gmail, Calendar and Drive on from the + menu so Claude can reach data outside the chat.

2

Google Drive

Claude reads Sheets, Docs, Slides and PDFs from Drive, and can upload files back to a folder.

3

Scope the folder

Point Claude at one Drive folder for the task — not your whole Drive.

4

Gmail

Claude drafts, sends, replies and labels — sending asks for explicit approval by default.

5

Agent Skills

A folder of instructions Claude loads on demand, so a task runs the same way every time.

6

Three layers

Metadata is always in context; the SKILL.md loads when triggered; resources load only when needed.

7

/skill-creator

Do the task once, verify the output, then let skill-creator write the SKILL.md for you.

8

Skills evolve

Update a skill as you learn what you want — saving over it replaces the old version, so re-run to confirm.

9

Skills use tools

A skill can drive the connectors for you — one command that checks Drive and Gmail and reports back.

Connect Google Drive

LAB 04

Meridian's finance data does not live on your laptop — it sits in a shared Google Drive folder. You upload the firm's wider finance files to Drive, enable the Google Drive connector, and confirm Claude can read them without you attaching anything by hand.

YOU'LL BUILD

A working Google Drive connection scoped to the Meridian finance folder.

Tools: Claude Cowork, Google Drive connector

Read the Meridian finance data from Drive

PROMPT — copy into Claude

Using the Google Drive connector, open the folder "Meridian Finance" in my Drive and tell me what you find.

For each file, give me:

- The file name and what kind of data it holds.
- The period it covers.
- The three figures you would use in a quarterly revenue summary.

Do not change, move or delete anything — read only.

List anything that looks inconsistent between the files.

NOTE Claude asks for approval before it moves, shares or deletes a Drive file.

Connect Google Drive

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 Upload the lab's mock-data files to a new Google Drive folder named Meridian Finance.
- 2 In Claude, click the plus sign in the composer and hover over Connectors.
- 3 Toggle Google Drive on and sign in to your Google account.
- 4 Approve the permissions Google asks for.
- 5 Paste the lab prompt so Claude reads the Meridian Finance folder.
- 6 Compare Claude's file summary against what you actually uploaded.
- 7 Note any inconsistency Claude reports between the files.

Connect Google Drive

✓ Check your work

Claude lists all three Meridian Finance files with their periods, reports FY2025 revenue of S\$24,850,000, and flags that the Q4 Advisory target disagrees between the two files — S\$2,320,000 in the targets file against S\$2,410,000 in the workbook. Nothing in Drive has been changed.

Refresh the Dashboard and Send the Summary

LAB 05

Quarter end has arrived. You refresh the dashboard you built in Lab 3 using the data Claude now reads from Drive, then have it draft a quarterly summary email to the head of finance. You read the draft against the figures and approve it before a single message leaves your outbox.

YOU'LL BUILD

An updated dashboard plus an approved quarterly summary email sent to yourself.

Tools: Claude Cowork, Live Artefacts, Google Drive connector, Gmail connector

Refresh the dashboard, then draft the summary

PROMPT — copy into Claude

Two tasks, in order.

1. Open my saved "Meridian Capital Partners — FY2025 Revenue" dashboard and update it from the Meridian Finance folder in Google Drive. Add a Q4 column to the desk breakdown and show each desk's actual against its target.
2. Then draft an email to <YOUR OWN ADDRESS> with the subject "Meridian FY2025 — Q4 revenue summary". In the body:
 - Total FY2025 revenue and the Q4 figure.
 - Each desk's Q4 actual against target, best and worst first.
 - Two sentences explaining the largest variance.
 - A closing line noting the Q4 Advisory target discrepancy.

Show me the draft. Do not send it until I approve it.

NOTE Replace <YOUR OWN ADDRESS> with your own email — never a real client's.

Refresh the Dashboard and Send the Summary

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 Reopen the dashboard you saved in Lab 3 from your sidebar.
- 2 Enable the Gmail connector from the plus menu, alongside Google Drive.
- 3 Paste the lab prompt, replacing the placeholder with your own email address.
- 4 Watch Claude refresh the dashboard from Drive and add the Q4 target comparison.
- 5 Check the refreshed dashboard: Q4 revenue should be S\$6,980,000 across the four desks.
- 6 Read the drafted email in full and compare every figure against the dashboard.
- 7 Approve the send, then confirm the message arrived in your own inbox.

Refresh the Dashboard and Send the Summary

✓ Check your work

The dashboard shows a Q4 column with actual against target per desk and Q4 revenue of S\$6,980,000. The email arrives in your own inbox with the correct totals and a closing note about the Advisory target discrepancy.

Build a /daily-brief Skill

LAB 06

Labs 4 and 5 showed what the connectors can do — but you had to describe the whole routine each time. Now you capture it once. The reliable way to build a skill is the Do / Verify / Save pattern: do the task with Claude once, refine until the output is right, then use the /skill-creator skill to save it. You have already done the doing — this lab turns it into a command, then updates it.

YOU'LL BUILD

A daily-brief Agent Skill you can run by name each morning, updated once.

Tools: Claude Cowork, Agent Skills, /skill-creator, Google Drive connector, Gmail connector

Do the routine, then save it as a skill

PROMPT — copy into Claude

Step 1 — DO. Run my morning finance briefing for Meridian Capital Partners, once, so we can get the format right together:

- What changed in the Meridian Finance folder on Google Drive since yesterday?
- Which desks are behind their quarterly target right now?
- What finance emails do I need to respond to today?

If a section has nothing in it, say so plainly — "No new files since yesterday" — rather than padding it out. End with one line on what most needs my attention, or "Nothing urgent — have a good day" if there is nothing. All money in Singapore dollars. Draft only — never send email.

Step 2 — SAVE. Once I confirm the output is right, use the /skill-creator skill to turn exactly this routine into a skill called daily-brief that I can run every morning.

NOTE Do it once, check the output, then save it — that order is what makes the skill reliable.

Build a /daily-brief Skill

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 Make sure the Drive and Gmail connectors from Labs 4 and 5 are still enabled.
- 2 DO — paste Step 1 of the lab prompt and let Claude run the routine once.
- 3 VERIFY — read the briefing and ask for changes until the format is right.
- 4 Check the fallback wording on any empty section.
- 5 Confirm it drafted and did not send anything.
- 6 SAVE — run Step 2 so /skill-creator turns the routine into a daily-brief skill.
- 7 Read the SKILL.md it produces, especially the description line.
- 8 Run the skill by name, then run it again.
- 9 UPDATE — ask for one change, such as putting the emails section first.
- 10 Save the change under the same skill name and confirm the replace prompt.
- 11 Run the skill once more to confirm the change took effect.

Build a /daily-brief Skill

✓ Check your work

Running the daily-brief skill by name produces a briefing with all three sections — Drive changes, desks behind target, emails needing a reply — using the plain fallback wording where a section is empty, ending with a single attention line, with all money in SGD and no email sent. After the update, the revised section order appears on the next run — and Claude warned you before replacing the existing skill.

Recap — Tools and Skills

1

Lab 04

You can now enable the Google Drive connector and read finance data held outside the chat.

2

Lab 05

You can now update the Live Artefact from connected data and deliver an approved summary by Gmail.

3

Lab 06

You can now turn a routine you have already done into a reusable Agent Skill, and update it.

TOPIC 03

Claude Projects

- 1 What a Project is
- 2 Project instructions
- 3 Assemble the workspace
- 4 Lab 7: the Meridian project

Why a Project?

A dedicated place for ongoing work, where context builds over time.

Working in one-off chats

- You re-attach the same files every session.
- Rules are restated from memory each time.
- Your artefacts are scattered across conversations.
- A colleague has to be told how you set it up.
- Knowledge leaves when you do.

Working in a Claude Project

- Files are added once as project knowledge.
- Custom instructions apply to every chat.
- Artefacts and skills live in one workspace.
- A colleague opens the project and is ready.
- The setup outlives any single conversation.

Three Ways to Start a Project

In Cowork, the files and instructions stay in a folder on your computer.

1

Start from scratch

Set up a new folder with instructions and files.

2

Import a project

Bring a project you made in Chat over to Cowork.

3

Use an existing folder

Give Claude a folder you already work from.

Creating a Project, Field by Field

New project → Start from scratch opens this dialog.

1

Name

What this body of work is called, e.g. Meridian Finance Reporting. Required.

2

Instructions

The standing rules for every chat in the project — house style, number formats, and the approval habit.

3

Add files

Drop in the files the work always needs, so no chat has to re-attach them.

4

Choose project location

Where the project folder lives on your computer — you can open and edit it outside Claude.

Then click Create. Memory can stay on, so the project also remembers what you work on over time.

What Goes in the Project

1

The project folder

A real folder on your computer holding the files and instructions — Claude works in it, and so can you.

2

Project instructions

The standing rules for this work: house style, SGD formatting, check before sending.

3

The finance data

The Meridian files, in the folder once, so no chat has to re-attach them.

4

Your skill

The daily-brief routine, available to everyone working in the project.

5

Your artefacts

The FY2025 dashboard, saved where the team looks for it.

6

Connected tools

Drive and Gmail, already enabled for the tasks this project runs.

Assembling the Meridian Project

Everything from Labs 1–5, gathered into one workspace you can hand to the team.

Key Concepts — Claude Projects

1

A Claude Project

A dedicated place for ongoing work, where context builds over time instead of resetting each chat.

2

Backed by a folder

In Cowork the files and instructions live in a real folder on your computer — you can still open them yourself.

3

Three ways to start

Start from scratch, import a project you made in Chat, or point Claude at a folder you already work from.

4

Project instructions

Standing rules for this body of work — house style, SGD formatting, check before sending.

5

Everything in one place

The finance data, the brand rules, your daily-brief skill and the dashboard, together.

6

Share the folder

A colleague opens the same project and inherits the data, rules and tools you set up.

Build the Meridian Claude Project

LAB 07

Everything you have built so far lives in separate places — a dashboard in your sidebar, files in Drive, a skill, and rules you have been restating by hand. In this final lab you gather them into one Cowork Project: a dedicated folder on your computer where context builds over time, and which a colleague can open and be immediately productive in.

YOU'LL BUILD

A Meridian Finance Reporting project holding the data, instructions, skill and dashboard.

Tools: Claude Cowork, Projects, Agent Skills, Live Artefacts, Google Drive connector

Set up the project instructions

PROMPT — copy into Claude

This project is Meridian Finance Reporting. Write the project instructions that should apply to every task I run in here:

- We are the finance team at Meridian Capital Partners Pte Ltd. Our four revenue desks are Advisory, Asset Management, Private Credit and Corporate Finance.
- All money in Singapore dollars, thousands separators, no decimals.
- Variances show both the absolute figure and the percentage.
- Every report carries the title "Meridian Capital Partners" and the reporting period, and the footer "internal use only".
- Headings in a serif font, body text in a clean sans-serif.
- Tone: factual and concise. No marketing language.
- Always show me a draft before sending anything. Never send email without my explicit approval.
- The finance data in this project folder is the source of truth.

Write these as clear project instructions, then confirm what you will now do differently in every chat in this project.

NOTE Project instructions apply to every chat in the project — you stop restating them.

Build the Meridian Claude Project

Full step-by-step, with the reasoning for each step, is in your Learner Guide.

- 1 In Cowork, choose New project, then Start from scratch.
- 2 In the Start a new project dialog, type the Name: Meridian Finance Reporting.
- 3 Paste the lab prompt's rules into the Instructions box.
- 4 Under Add files, drop in the Meridian finance data and the brand guidelines.
- 5 Set Choose project location to where you want the folder to live, then click Create.
- 6 Add the daily-brief skill from Lab 6 to the project.
- 7 Open the project folder on your computer and confirm the files are really there.
- 8 Save the FY2025 dashboard into the project so it sits with the data it reports on.
- 9 Start a fresh chat in the project and ask for a one-paragraph Q4 summary.
- 10 Confirm the folder holds the data, instructions, skill and dashboard, ready to share.

Build the Meridian Claude Project

✓ Check your work

A Meridian Finance Reporting project exists, backed by a folder containing the finance data and brand guidelines, with project instructions set, the daily-brief skill available and the dashboard saved. A brand-new chat in the project produces a Q4 summary in SGD with the correct header and footer without you attaching a file or restating a single rule.

Recap — Claude Projects

1

Lab 07

You can now assemble the data, instructions, skill and dashboard into one reusable Project.

WRAP-UP

Summary & Next Steps

- 1 What you built
- 2 Staying in control
- 3 Next steps
- 4 Q&A

What You Achieved

1

Process documents

Set up the Cowork desktop workspace and have Claude process a folder of documents into a structured summary.

2

Build a Live Artefact

Build, save and download a Live Artefact, including an interactive sales dashboard from supplied data.

3

Connect Drive

Connect the Google Drive connector so Claude can read finance data held outside the chat.

4

Deliver by Gmail

Refresh a Live Artefact from connected data and send an approved summary with the Gmail connector.

5

Save it as a skill

Turn a verified routine into an Agent Skill with /skill-creator, update it, and explain a skill's three layers.

6

Build the Project

Assemble a Claude Project that holds the data, instructions, skill and dashboard as one reusable team workspace.

Staying in Control

Claude drafts and builds; you check and approve.

Work from mock data

Use the supplied synthetic Meridian data — never real client records in training.

Scope the connector

Give Claude one folder for the task, not your entire Drive.

Check every figure

Read the artefact's numbers back against the source file before you trust them.

Approve before sending

Read the drafted email in full; approve it only when the figures match.

Use a test recipient

Send class exercises to yourself, never to a real client.

Keep the original

Let Claude write new files; leave the source data untouched.

Next Steps

1

Rebuild it with your own data

Repeat Lab 2 using a real report you own, on a copy of the file.

2

Connect one source

Enable the connector for the place your finance data actually lives.

3

Automate one routine

Pick the thing you do every morning and capture it as a skill.

4

Start one Project

Give your main body of work a project folder, and let the context build.

THANK YOU FOR ATTENDING

Your Cowork toolkit is ready

A Live Artefact dashboard, two connected tools, a daily-brief skill and the Project that holds them all.
