

Lab 06 — Build a /daily-brief Skill

Topic 02 · Tools and Skills

Meridian Capital Partners Pte Ltd — all data in this lab is synthetic and for training only.

Goal

Labs 4 and 5 showed what the connectors can do — but you had to describe the whole routine each time. Now you capture it once. The reliable way to build a skill is the Do / Verify / Save pattern: do the task with Claude once, refine until the output is right, then use the /skill-creator skill to save it. You have already done the doing — this lab turns it into a command, then updates it.

You'll build

A daily-brief Agent Skill you can run by name each morning, updated once.

Tools: Claude Cowork, Agent Skills, /skill-creator, Google Drive connector, Gmail connector

The prompt

Copy this into Claude (it is also in PROMPT.md):

PROMPT — copy into Claude

Step 1 — DO. Run my morning finance briefing for Meridian Capital Partners, once, so we can get the format right together:

- What changed in the Meridian Finance folder on Google Drive since yesterday?
- Which desks are behind their quarterly target right now?
- What finance emails do I need to respond to today?

If a section has nothing in it, say so plainly — "No new files since yesterday" — rather than padding it out. End with one line on what most needs my attention, or "Nothing urgent — have a good day" if there is nothing. All money in Singapore dollars. Draft only — never send email.

Step 2 — SAVE. Once I confirm the output is right, use the /skill-creator skill to turn exactly this routine into a skill called daily-brief that I can run every morning.

Note: Do it once, check the output, then save it — that order is what makes the skill reliable.

Steps

- 1. Make sure the Drive and Gmail connectors from Labs 4 and 5 are still enabled.**

The skill drives those connectors, so it can only work if they are on.

- 2. DO — paste Step 1 of the lab prompt and let Claude run the routine once.**

You are not writing instructions yet; you are doing the task together so Claude sees what good looks like.

- 3. VERIFY — read the briefing and ask for changes until the format is right.**

Reorder a section, tighten the wording, fix a heading. Whatever you settle on here is what the skill will reproduce.

4. Check the fallback wording on any empty section.

The fallbacks are what stop the routine inventing filler on a quiet morning — get them right before you save.

5. Confirm it drafted and did not send anything.

A routine you will run unattended must not be able to send mail on its own.

6. SAVE — run Step 2 so /skill-creator turns the routine into a daily-brief skill.

The skill-creator skill writes the SKILL.md for you, from the run you just verified.

7. Read the SKILL.md it produces, especially the description line.

The description is how Claude decides whether to load the skill for a future task — make it specific.

8. Run the skill by name, then run it again.

The same structure both times is the payoff: one command instead of re-describing the routine every morning.

9. UPDATE — ask for one change, such as putting the emails section first.

A skill is not written once. You keep refining it as you learn what you actually want each morning.

10. Save the change under the same skill name and confirm the replace prompt.

Claude warns that a skill with this name already exists and that replacing it cannot be undone — read that prompt before you accept it.

11. Run the skill once more to confirm the change took effect.

Always re-run after an update; that is how you know the new version is the one being loaded.

Check your work

Running the daily-brief skill by name produces a briefing with all three sections — Drive changes, desks behind target, emails needing a reply — using the plain fallback wording where a section is empty, ending with a single attention line, with all money in SGD and no email sent. After the update, the revised section order appears on the next run — and Claude warned you before replacing the existing skill.

Before you move on

Use only the supplied mock data and your own test accounts. Never put real client, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
