

## Lab 04 — Connect Google Drive

### Topic 02 · Tools and Skills

*Meridian Capital Partners Pte Ltd — all data in this lab is synthetic and for training only.*

#### Goal

Meridian's finance data does not live on your laptop — it sits in a shared Google Drive folder. You upload the firm's wider finance files to Drive, enable the Google Drive connector, and confirm Claude can read them without you attaching anything by hand.

#### You'll build

A working Google Drive connection scoped to the Meridian finance folder.

**Tools:** Claude Cowork, Google Drive connector

#### Mock data

The files for this lab are in `mock-data/`:

- `meridian-client-list.csv`
- `meridian-desk-targets-fy2025.csv`
- `meridian-quarterly-workbook-fy2025.csv`

Leave these files unchanged — let Claude write its output elsewhere.

#### The prompt

Copy this into Claude (it is also in PROMPT.md):

##### **PROMPT — copy into Claude**

Using the Google Drive connector, open the folder "Meridian Finance" in my Drive and tell me what you find.

For each file, give me:

- The file name and what kind of data it holds.
- The period it covers.
- The three figures you would use in a quarterly revenue summary.

Do not change, move or delete anything — read only.

List anything that looks inconsistent between the files.

*Note: Claude asks for approval before it moves, shares or deletes a Drive file.*

#### Steps

**1. Upload the lab's mock-data files to a new Google Drive folder named Meridian Finance.**

The lab supplies the quarterly workbook, the desk targets and the client list as mock data.

**2. In Claude, click the plus sign in the composer and hover over Connectors.**

This is where you turn individual connectors on and off for your account.

### **3. Toggle Google Drive on and sign in to your Google account.**

On a Team or Enterprise plan an owner must enable connectors for the organisation first.

### **4. Approve the permissions Google asks for — grant FULL READ access.**

Approve only what you are willing to let Claude reach. But if you decline the read scopes here, Claude connects yet cannot open anything.

### **5. If Claude reports an "insufficient scope" error, reconnect the connector.**

Settings → Connectors → Google Drive → Reconnect, and accept the read permissions. A connector can show "Connected" while still missing the drive.readonly scope it needs to search and read files.

### **6. Paste the lab prompt so Claude reads the Meridian Finance folder.**

Naming the folder scopes the task; Claude does not need access to your whole Drive.

### **7. Compare Claude's file summary against what you actually uploaded.**

Confirm it found every file and read the right periods before you rely on it.

### **8. Note any inconsistency Claude reports between the files.**

The Q4 Advisory target deliberately disagrees between two files — a real check.

## **Check your work**

Claude lists all three Meridian Finance files with their periods, reports FY2025 revenue of S\$24,850,000, and flags that the Q4 Advisory target disagrees between the two files — S\$2,320,000 in the targets file against S\$2,410,000 in the workbook. Nothing in Drive has been changed.

## **Before you move on**

Use only the supplied mock data and your own test accounts. Never put real client, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
